

NOAA Nautical Charting Calendar

Print on Demand Nautical Charts

Print on Demand is the use of large format, ink-jet plotters to print official NOAA charts from up-to-date digital files. Thus, newly purchased charts are completely corrected by NOAA's experienced nautical cartographers. No searching for old Notices to Mariners and no manual application of published changes is required.

NOAA made other changes with Print-on-Demand. A new, more vibrant color set improves readability. Water-resistant paper protects the image. Additional, chart-related information is included in the chart margin. Charts can be printed with or without LORAN. Custom overlays for special needs by groups such as the marine pilots are possible.

Print on Demand was developed collaboratively by NOAA and OceanGrafix, LLC, of St. Paul, MN. NOAA developed the chart maintenance and management technology; OceanGrafix developed the chart assembly, printing, and distribution technology, including remote printing right in a retailer's store.

Table 1. Total Differences and Other Comments

Chart No.	Chart Name	Scale	Lat. Range	Long. Range	Notes
11361	Coast of Maine (Chart 11361)	1:50,000	43° 00' N - 45° 00' N	69° 00' W - 71° 00' W	...

Selected Excerpts from Coast Pilot 8, Chapter 8

0701. **Caution During High Water of the river.** - Vessels navigating the Merrimack River at High Water should exercise caution in the vicinity of the dam and locks. The Merrimack River is a tidal river and the water level is subject to fluctuations. The Merrimack River is a tidal river and the water level is subject to fluctuations. The Merrimack River is a tidal river and the water level is subject to fluctuations.

Updated 12/30/00

Notice to Mariners applied through Local 5200 dated 12/29/00 and 12/30/00. Additional NOS updates applied in advance of publication.
